

GROUP 4

AI Meeting Minutes Generator

Track	Generative AI - LLM
Duration	2 Weeks (10 working days, 4 hours/day)
Dataset	No traditional training dataset required
API	Instructor-approved LLM API required
User Interface	Required

Project Analysis

Organizations spend significant time converting raw meeting notes or transcripts into structured meeting minutes. Important decisions and action items can also be missed when notes are unstructured.

Students must build an LLM application that accepts meeting notes or a transcript and produces clear, structured minutes without inventing information that is not present in the input.

What the Student Must Build (Mandatory)

- Accept pasted meeting notes or a text transcript.
- Validate that meaningful meeting content has been provided.
- Use an approved LLM API and a reusable prompt template.
- Generate structured meeting minutes.
- Generate a concise executive/meeting summary.
- Extract key discussion points.
- Identify key decisions made during the meeting.
- Extract action items.
- For each action item, identify owner and deadline only when they are stated or clearly supported by the input.
- Mark missing owner/deadline information as Not Specified rather than inventing it.
- Allow the user to review the generated result.
- Include a functional user interface.

Technical Requirements

- Python
- Approved LLM API
- Prompt Engineering
- Input Validation
- API error handling
- Environment variables for API keys
- Git & GitHub
- Streamlit/Gradio/FastAPI or another suitable UI framework

Input / Evaluation Requirements

- Use instructor-prepared meeting-note/transcript examples for testing.
- Test short notes, long notes, meetings with clear decisions, and meetings where owners/deadlines are missing.
- Compare generated minutes against the source notes to check that facts, decisions, names, and action items were not invented.

Optional Features (Bonus)

These features may improve the project but are not required for basic project completion.

- Export minutes to PDF
- Email meeting minutes
- Multi-language support
- Speaker identification when speaker names are provided
- Meeting history
