

GROUP 7

GovFlow AI - Government Correspondence & Action Management

Track	Generative AI - LLM + RAG
Duration	2 Weeks (10 working days, 4 hours/day)
Domain	Government / Public Administration
Knowledge Base	Government policies, procedures, circulars, correspondence rules, and approved reference documents
User Interface	Required

Project Analysis

Government offices receive letters, memos, circulars, requests, and other correspondence that must be understood, routed, tracked, and acted upon. Manual handling can make it difficult to quickly identify the subject, responsible department, required action, deadline, or relevant policy.

GovFlow AI is an LLM + RAG project that helps staff analyze government correspondence and retrieve relevant policy/procedure information from an approved document knowledge base. It should support staff decision-making rather than make final government decisions automatically.

What the Student Must Build (Mandatory)

- Accept a government letter, memo, notice, or correspondence as text or an approved document input.
- Extract or summarize the subject and main request.
- Identify important entities such as sender, department, reference number, dates, and requested action when present.
- Classify or recommend the responsible department/category.
- Identify deadlines or urgency when explicitly stated.
- Generate a concise action summary for staff.
- Use RAG to retrieve relevant government policies, procedures, circulars, or guidance.
- Show the source/document used for policy-based guidance.
- Avoid inventing policy requirements that are not supported by retrieved documents.
- Allow staff to review the AI output.
- Maintain basic correspondence/action history.
- Include a functional user interface.

Technical Requirements

- Python
- Approved LLM API
- RAG pipeline
- Document text extraction
- Chunking and embeddings

- FAISS or Chroma vector store
- Prompt Engineering
- Input validation and error handling
- Secure API key handling
- Git & GitHub

Document / Knowledge Base Requirements

- Use only instructor-approved government policies, procedures, circulars, forms, and correspondence guidance.
- Organize documents by source, title, date/version, and department where possible.
- Retrieved guidance should display its supporting source.
- Students must test cases where the knowledge base does not contain enough information and return an appropriate insufficient-information response.

Optional Features (Bonus)

These features may improve the project but are not required for basic project completion.

- PDF upload and extraction
- Advanced routing dashboard
- Priority queue
- Email notification
- Somali/English support
- Role-based staff access
- Analytics dashboard

References and Starting Resources

- Instructor-provided government policy/procedure documents
- Approved ministry/agency public documents
- LLM API documentation
- FAISS/Chroma documentation
